

BLEDOR Chlorofiltre

COVER CROP

The BLEDOR Chlorofiltre® is the perfect cover between 2 cereals to keep the take-all and other soil diseases under control.

BLEDOR Chlorofiltre

50% BINGO Bengal vetch
44% MASSA hairy vetch
6% VITASSO brown mustard

Number of seeds / m²:

- 126

Following culture:

- Winter wheat, winter barley,
spring crops

Ange:

- bio fumigation

Advantages for the card

• High biomass production during summer between 2 wheats

Thanks to the complementarity of the vetches and of the brown mustard, the biomass production is optimised.

• Biofumigation

The VITASSO brown mustard is a late variety, allowing to maximise the glucosinolate content (sinigrin). Those glucosinolates reduce the take-all and the fusarium wilt.

• Enhance the biological activity of the soil

The MASSA and TITANE vetch are rustic varieties with a low sensitivity to pests (slugs, aphids...) and stimulating the development of the VITASSO brown mustard. Thanks to the low C/N ratio, there is a very good mineralization.

VOUS CONSEILLE

myCHLORofiltre®

myChlorofiltre app is a decision tool dedicated to covercrop. Developed by Cérieence, myChlorofiltre is the only app to estimate the cover crop biomass thanks to pictures; it is an innovative tool, easy to use and free !

It has 3 complementar services:

- Choosing my cover crop
- Successful sowing
- Estimating my biomass

www.mychlorofiltre.fr

SO THAT THEY SITUATIONS?

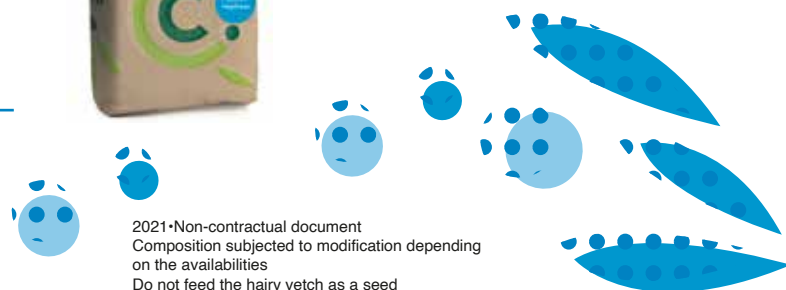

Short intercropping	Long intercropping

Implementation advices

- Managing the crop residue
- Shallow stubble cultivation from 3 up to 5 cm
- Seed between 1 and 2 cm depth
- Roll to ensure the seed-to-soil contact

PACKAGING
Bag of 20kg

2021-Non-contractual document
Composition subjected to modification depending on the availabilities
Do not feed the hairy vetch as a seed
