FASSOL New Chlorofiltre

COVER CROP

The FASSOL New Chlorofiltre® is easily seeded and destructed.

FASSOL New Chlorofiltre

45% DAIKON Asian radish
 30% STALA / LILA / NATRA
 phacelia
 20% TABOR Egyptian clover
 5% VITASSO brown mustard

Number of seeds / m²:

- 155

Following culture:

- After harvest

Range:

- Weed suffocation

Advantages for the card

• Low seed rates

The species and varieties selected for this mix have the particularity of having low TKG which makes it possible to reduce the seed rates.

• Easy destruction by simple rolling and/or frost (without shredding)

The DAIKON Asian radish and the phacelia are easily destroyed species through simple rolling. The TABOR Egyptian clover is a single cut variety, it doesn't grow again after being destroyed.

• Soil fertility

The C/N ratio is lower than for a mix with white mustard, allowing a quick restitution of the elements and improving the soil fertility.

• Quick soil cover

The TABOR Egyptian clover quickly produces some biomass and when complementing the DAIKON Asian radish and the phacelia, it allows a quick cover of the soils leading to weed suffocation.

myCHLORofiltre®

myChlorofiltre app is a decision tool dedicated to covercrop. Developed by Cérience, myChlorofiltre is the only app to estimate the cover crop biomass thanks to pictures; it is an innovative tool, easy to use and free !

It has 3 complementar services:

- Choosing my cover crop
- Successful sowing
- Estimating my biomass

www.mychlorofiltre.fr

SO THAT THEY SITUATIONS?

Short intercropping	Long intercropping
	

Implementation advices

- Managing the crop residue
- Shallow stubble cultivation from 3 up to 5 cm
- Seed between 1 and 2 cm depth
- Roll to ensure the seed-to-soil contact

PACKAGING
 Bag of 10kg

Route de la Ménitrié - Beaufort-en-Vallée –
 49250 BEAUFORT EN ANJOU - FRANCE
