L'AGRONOME SEMENCIER

FIGARO

SPRING LUPIN

RELIABILITY AND GOOD PROTEIN CONTENT

FIGARO

Type : Spring
Registration : 2016

Plant profile
Blooming: Precocious
Maturity: Precocious
PMG: 320 gr (indicative)

ITS STRENGTHS:

- A very low alkaloid content
- A very good stalk strength
- High protein content

• ITS STRENGTHS

RDT A1 (% controls)	RDT A2 (% témoins)	% protein content	% oil content
96.3	102	36.8	8.7

CÉRENCE ADVISES YOU

Like protein peas and broad beans, the sweet white lupin is a leguminous crops.

It is a plant with a high protein content that can be produced and valued on the farm.

The lupin is an excellent crop rotation head in rotations.

It is also a fairly low-input crop, and the use of the seed offers large agri-food and industrial market.

Within the family of white lupins, there are sweet white lupin from winter type and spring type.

Instructions for use:

- Lupins are very sensitive to active limestone and hydromorphy.
- Search for an airy soil
- Inoculation required when pH > 6.5 or in the first year
- Seed 50 to 50 seeds / m² at a depth of 2 to 3 cm
- Lupin values water supplies, however, wait for blooming of the 1st stage

• Harvest:

- . From the end of August/beginning of September
- . At 14 to 15% of humidity

Packaging:

Dose of 100,000 seeds
