L'AGRONOME SEMENCIER

ALIENOR

FORAGE - TALL FESCUE

THE QUEEN OF QUALITY

ALIENOR

Characteristics:

- Tall fescue
- Very soft leaves (6.7)

Heading date:

- 15/05 (very late)

Heading date recorded in official trials performed in West Central France

Profile:

- Persistent

Persistency:

- 4 years and more

Soil types:

- All types

Sowing rate:

- 25- 30 kg/ha (10- 12 kg/ac) straight
- or in combination with white clover
- 2- 3 kg/ha (0.8- 1,2 kg/ac)

ITS ADVANTAGES

• A very soft tall fescue:

- ALIENOR is a variety with a very late heading date but that starts early in the spring, thus offering more than 48 days of grazing period before heading.
- Easy to manage the pasture, thanks to its late heading date.

• A high-quality and highly digestible forage

- ALIENOR has excellent disease resistance, which helps to secure production throughout the cycles.
- ALIENOR is very palatable because it combines a high content of soluble sugars, a very healthy foliage, and an excellent foliage softness.

FOR WHAT USE ?

Grazing	Mowing
	

Sowing (August-September or March-April):

- Roll before sowing
- Sow on a thin seed bed at a depth of 1 to 2 cm ;
- Roll again right after sowing.

Protection:

- Monitor slugs during the implantation and take action if needed;
- Remove the weeds (at 3-4 leaves stage) if needed (seek advice from your technician).

Packaging:
BAG of 15 kg
