TENACE

FORAGE - PERENNIAL RYEGRASS

A FORTRESS AGAINST RUST

TENACE

Features:

- Perennial ryegrass
- Tetraploid

Heading date:

- 14/05

Heading date recorded in official trials performed in West Central France

Profile:

- Persistent

Persistency:

- 4 years and more

Soil types:

- All types

Sowing rate:

- 25-30 kg/ha (10-12 kg/ac) straight

BENEFITS

• A rust-proof variety:

- TENACE is a healthy and palatable forage, thanks to its exceptional resistance to diseases.

• Excellent spring growth and very good annual yields:

- TENACE is very vigorous and starts early in the spring.
- TENACE offers a good annual yield: after each harvest, its regrowth is vigorous, leafy and very healthy.

FOR WHAT USE ?

Grazing	Mowing
	

Sowing August-September or March-April:

- Prepare a thin surface soil and firm it deeply ;
- Sow at a depth of 1 up to 2 cm;
- Roll right after sowing.

Protection:

- Monitor slugs during the establishment and take action if needed;
- Remove the weeds as early as 3-4 leaves stage if needed (seek advice from your technician).

Packaging:
15 kg bag
