L'AGRONOME SEMENCIER

FOXY

FORAGE - TALL FESCUE

EARLY START

FOXY

Product features:

- Tall fescue
 - 10/04
- Heading date recorded in official trials performed in West Central France

Profile:

- Persistent
- ## Persistency:
- 4 years and more
- ## Soil types
- All types

Sowing rate:

- 25- 30 kg/ha (10- 12 kg/ac) straight
- 7- 8 kg/ha (2.8- 3.2 kg/ac) in combination with hybrid ryegrass 6- 7 kg/ha (2.4- 2.8 kg/ac) and red clover 12- 13 kg/ha (4.9- 5.3 kg/ac)

BENEFITS

- **An abundant and early forage production to reduce the risk of summer drought:**
 - FOXY is a earlier variety in comparison to many others, to secure forage yields.
 - In favorable conditions, it continues to provide a high amount of biomass during the summer with leafy regrowth, offering grazing opportunities (unlike Mediterranean tall fescues that are also early but become dormant in the summer).
- **A persistent and consistent variety:**
 - FOXY is a temperate-type variety and therefore has excellent winter hardiness.
 - It is also very drought tolerant.
- **Can be used for pasture renovation:**
 - FOXY has a very fast establishment.
 - This characteristic makes FOXY one of the few tall fescue varieties that can be used for pasture renovation and oversowing.

FOR WHAT USE?

Grazing	Mowing
Possible after the 1st cut	

Sowing:

- August-September or March-April
- Roll before sowing
- Sow on a thin seed bed at a depth of 1 to 2 cm ;
- Roll right after sowing.

Protection:

- Monitor slugs during the establishment and take action if needed;
- Remove the weeds during the establishment at 3-4 leaves stage if needed (seek advice from your technician).

Packaging:
Sac de 15 kg
