Chlorofiltre® FAST

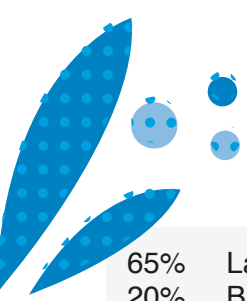

COVER CROP

FLY

Le Chlorofiltre® FAST is ideal for broadcast sowing in existing crops for long crop rotations

Chlorofiltre® FAST

FLY

65% Late-season Moha 
 20% Brown mustard
 VITTASSO 
 15% Asian radish DAIKON

Seeds per m²: 200
Dosing rate: 15 kg/ha
Subsequent crop: Spring crops

Range:
 - Sowing under cover

ITS ADVANTAGES

• Species suitable for broadcast sowing

According to tests carried out, the species in this mixture perform well when broadcast sown over distances of up to 24 metres, depending on the equipment used. Furthermore, they produce a high yield of summer biomass and achieve proper establishment.

• Soil structuring

The Asian radish DAIKON promotes strong soil structuring thanks to its root system. The species in this mixture have complementary root systems.

• Seed pelleting

Chlorofiltre FAST benefits from the new S.A.S FLY seed technology, which allows for conventional sowing or broadcast sowing under cover. This seed pelleting technology facilitates crop emergence under limiting conditions and improves the ballistic effect (seed projection effect) for sowing up to 24m, depending on the equipment used (preferably a fertilizer spreader).

IN WHICH SITUATIONS

Short intercropping	Long intercropping
	

Planting advice:

- Manage crop residues
- Shallow tillage to a maximum depth of 3–5 cm
- Sow at a depth of 1–2 cm
- Roll to ensure seed-to-soil contact

Destruction advice:

- Rolling or shredding
- Mulching • Chemical (subject to local Regulations)
- From 2.5 t/DM/ha
- 40 to 60 days before planting the subsequent crop

VOUS CONSEILLE

myCHLORofiltre®

The myChlorofiltre app is a DSS designed for the cultivation of cover crops.

Developed by Cérence, myChlorofiltre is the only app that allows you to perform biomass evaluation on cover crops from photos; an innovative, easy-to-use tool that is free of charge!

It includes three complementary services:

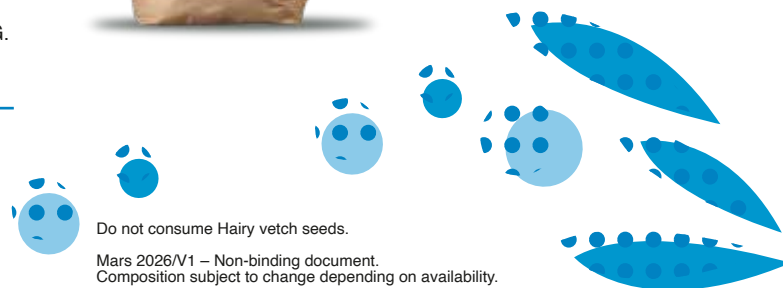

- Choose my cover crop
- Ensure successful planting
- Perform Biomass evaluation
