M-MÉTEIL MONTAGNE
FORAGE MIXTURE

FOR A LATE, FROST-RESISTANT FORAGE CROP!

M-MÉTEIL MONTAGNE

Profile:

- Mixture of immature cereals

Persistence: - 6 to 9 months

Soil types:

- All soil types

Sowing rate (kg/ha):

- 75 kg/ha

Composition (by weight):

- 35% TONUS multi-stemmed rye

- 15% SAVANE hairy vetch

- 50% ARKTA field peas

ITS ADVANTAGES

- **A mixture specially designed for cold regions:**
 - TONUS multi-stemmed rye is highly cold-tolerant
 - ARKTA field peas are a hardy variety, whilst SAVANE is a winter-type hairy vetch
- **Forage with a higher protein content:**
 - The presence of legumes improves the nutritional quality of the forage
 - SAVANE hairy vetch is characterised by its rapid establishment and ensures a good pea/vetch balance in the forage
- **An excellent crop rotation partner:**
 - TONUS multi-stemmed rye ensures excellent ground cover thanks to its high tillering capacity and has limited regrowth.
 - The presence of legumes provides a source of nitrogen for the subsequent crop (residual effect).

Because simply combining the best varieties does not necessarily result in the best mixtures, this blend incorporates varieties that have been selected and evaluated for their suitability in mixtures through appropriate breeding programmes.

The aim of this composition is to ensure reliable production by adapting to intra-plot heterogeneity and climatic uncertainties.

To this end, it relies on a diversity of species and even intra-specific diversity, chosen to guarantee the best possible performance.

IN WHICH SITUATIONS?

Grazing	Mowing
	<i>silage or banding</i>

Sowing (October to early November):

- Sow at a depth of 1 to 2 cm;

Seedling protection:

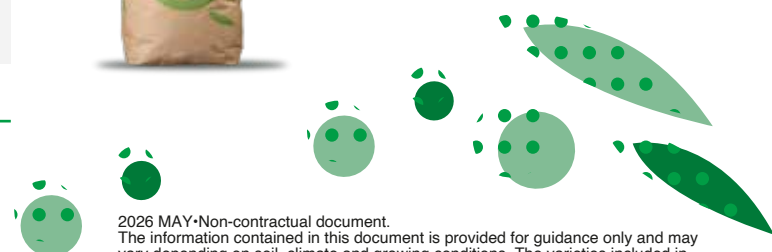

- Keep an eye out for slugs and snails at the time of sowing and take action if necessary.

Fertilisation:

- Before applying any fertiliser, take into account the nutrients available in the soil by referring to the soil analysis and the nutrients returned by livestock.

Packing:
Bag of 25 kg

2026 MAY-Non-contractual document.

The information contained in this document is provided for guidance only and may vary depending on soil, climate and growing conditions. The varieties included in the mixture are subject to change depending on availability. Do not allow hairy vetch to be consumed as seed.
