

Cérieence

L'AGRONOME SEMENCIER

ODETTE

WHITE MUSTARD

Very late variety with flowering and a very high level of nematode reduction

ODETTE

PROPERTIES

- Species: White mustard
- Origin: Vandinter/Cérieence
- Registration: Germany 2020
- Flowering: very late
- PMG: 7 g
- Sowing rate: 8 to 10 kg/ha pure

ACTION

Nematicide

- Heterodera schachtii (beetroot): class 2

ADVANTAGES

- ODETTE significantly reduces the population of beet nematodes (*H. schachtii*), class 2 German catalogue - BSA).
- ODETTE is a variety that establishes itself quickly and covers the ground rapidly.
- ODETTE is very late to flower:
 - no risk of bolting for early sowings.
 - low lignification: easier to destroy (crushing, stubble cultivation) and better mineralisation in spring.
 - longer vegetation cycle (around 3 months) - good root development for a good structure.

OFFICIAL RESULTS

German catalogue of anti-nematode mustard varieties 2025

Varieties	Years of registration	Resistance to cyst nematodes - <i>H. schachtii</i>	Soil coverage rate (1 = poor/9 = very good)	Late flowering (1 = very late/9 = very early)
ODETTE	2020	Classe 2	6	2
Witness A	2003	Classe 2	6	4
Witness S	2008	Classe 2	6	3
Witness A	2019	Classe 2	4	2
Witness S	2019	Classe 2	5	2
Witness S	2019	Classe 2	6	3

German catalogue BSA 2025

FOR WHAT SITUATION?

Cover	companion plant oilseed rape
	

Planting advice:

- Manage crop residues
- Shallow stubble cultivation to a maximum depth of 3 to 5 cm
- Sow at a depth of 1 to 2 cm • Roll to ensure seed-soil contact

Packing:
Bag of 25 kg
