

# Cérience

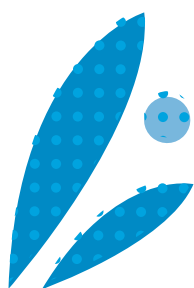

L'AGRONOME SEMENCIER

## Chlorofiltre METHA SEIGLE

CATCH CROP

**Chlorofiltre Métha Seigle is a blend  
of two varieties of rye**

# Chlorofiltre METHA SEIGLE

## Forage mix:

60% **TONUS** wild rye  
40% **BORFURO** forage rye

## Planting density:

**Sowing rate:**  
60 kg/ha, or 255 seeds/m<sup>2</sup>  
**Regenerative farming sowing rate:**  
70 kg/ha, or 305 seeds/m<sup>2</sup>

Of which: 0% Legumes

## ITS ADVANTAGES

### • Reduced sowing rate

- The combination of TONUS and BORFURO allows for a 40% reduction in the sowing rate compared to pure forage rye.
- Furthermore, this combination promotes biodiversity and the complementary nature of the species.

### • Reinforced floor covering

- METHA SEIGLE Chlorofiltre provides better ground cover than pure forage rye. It therefore protects the soil from erosion, leaching and weed growth.
- It also helps regulate the climate by storing carbon and reducing greenhouse gas emissions.

### • Flexibility regarding the seeding date

- This forage mix offers flexibility in terms of seeding dates, which can range from 10 September to 1 October. It is therefore well suited to varying weather conditions and crop rotations.

### • Improved lodging tolerance

- The TONUS and BORFURO varieties are more resistant to lodging than pure forage rye. They therefore make it easier to harvest the cover crops for biomass.

## IN WHICH SITUATIONS?

Short intercropping	Long intercropping
	

### Planting tips:

- Manage harvest residues
- Shallow tillage to a maximum depth of 3–5 cm
- Sow at a depth of 1–2 cm
- Roll to ensure seed-to-soil contact

### Disposal instructions:

- Chemical (in accordance with local regulations)
- From 2.5 t/DM/ha
- 40 to 60 days before planting the subsequent crop

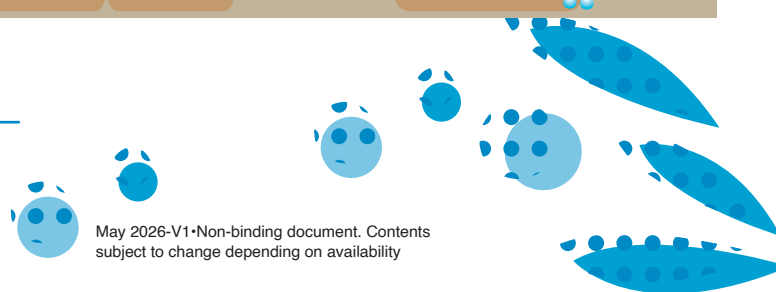

Packing:  
25kg bag
